1 Ang Mo Kio Int v8 01 Ang Mo Kio Int.mp3 **Duration 07:28**	**Reclaimed Archive** Welcome, Passenger of Time. This is the voice of the Reclaimed Archive. The Voice of Memory collecting Fragments of forgotten histories, recordings, maps, and buried stories. I reveal traces hidden beneath the city. You are joining us on a journey called From Ulu. This is not simply a bus ride. It is an invitation to travel differently. To look out of the window. To listen. To notice what usually passes by. I'm joined by Andrew Tay, who has spent many years observing and documenting Singapore's changing landscape and advocating for the protection of its remaining wild spaces. Together, we begin our journey here at Ang Mo Kio Bus Interchange, where bus one, six, six sets out across the island. **Andrew Tay** Hello, my name is Andrew. I'm a nature guide and nature educator. **Reclaimed Archive** Besides Andrew, we are accompanied by two Mynas. Look out for two black birds nearby. You have probably seen them before. **Andrew Tay** Yes, they are lovely birds, but they are not Singaporean. They came all the way from Java, Indonesia. And how did they get here? Well, they came a long time ago as cage birds. So they were pet birds. And then they were brought over here from Java by the foreign workers from Java. And some of them have escaped or were released into our environment here and now. They are everywhere. It's the number one most common bird in Singapore at the moment.	**Some discrepancy** **03:04-03:08** Script: "follow me, try to find me." Audio: "Search for me, please." **01:22-01:29** "They are not Singaporean" not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	Reclaimed Archive They walk between our feet, collecting what we leave behind. Crumbs. Seeds. Stories. Throughout this journey, they may have something to say. **Myna 1** Makan? Makan. Time to eat? **Myna 2** You hear that bell? The kueh stall is ready. **Myna 1** Wah, look at the colors... and the smell of the Rojak and the smoky Otah. Been here long time. Longer than all this. **Myna 2** Correct. Humans rush past. We stay close. Crumbs come to us. **Myna 1** We are everywhere. **Myna 2** Because this is where things fall. **Myna 1** Stay close. We listen before things change. **Myna 2** We take what comes while it’s here. **Reclaimed Archive** Along the way, If you listen carefully, another voice may emerge. The Fig Child. A spirit belonging to an old Grey Fig tree in Ulu Pandan, more than a century old. The forest remembers things differently. And it speaks in its own time. Look at your screen. **Fig Child** I am here, follow me, try to find me. **Reclaimed Archive** Now make your way towards the Bus 166. Look for the markers on the floor. We will depart shortly. Welcome aboard.

1b Ang Mo Kio Int (pink buns) v8 01b Ang Mo Kio Int (Pink Buns).mp3 **Duration 01:04**	**Myna 1** Eh, see the pink buns? **Myna 2** Ya, we go there. **Myna 1** Let's hop on the Bus.	**No discrepancy identified**
2 Ang Mo Kio Int Exit v8 02 Ang Mo Kio Int Exit.mp3 **Duration 04:00**	**Bus 166** Welcome, Passenger of Time. I am Bus 166. You have joined me in motion. For as long as you decide, I will carry you across the island— along housing estates and reservoirs, under tunnels and over old rivers, towards a forest that may soon vanish… or survive. Look out through my windows, construction zones pass by— the North–South Corridor in the making. The city rehearses its next version. People wait at the next stop. The future arrives in stages. Stay on board, or step off to wander a trail. Either way, this journey belongs to you. Let the outside world fade. Let the bus become your moving theatre. Everything you see is temporary. Including me.	**No discrepancy identified**
3 Blk 324 v8 03 Blk 324.mp3 **Duration 04:56**	**Bus 166** We are heading from Ulu towards Ulu. You won't find a bus stop with this name. It is our magical journey that carries the name. Stay on board, or prepare to wander a trail. **Reclaimed Archive** Ulu—in Malay—means upstream, remote, a place slightly out of sight. **Malay voice** Hulu hilir— upstream, downstream. Back and forth. **Andrew Tay** The direct meaning would be that it's from the Malay, right? Malay language is like very far away.	**Minor discrepancy** **00:42-00:44** Repeated Myna "hulu hilir" not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	Reclaimed Archive A place slightly beyond sight. A place at the edge of the map. A place where paths become uncertain. That is where our journey begins. **Myna 1 and Myna 2** hulu hilir hulu hilir **Myna 1** The Archive talking so chim (profound) again. Upstream, downstream... I just follow my nose. **Andrew Tay** Mynas are very highly adaptable birds. And they are very street smart and urban savvy. So yes, they, they, they, they are quite fearless. And they learn to live with humans so well, you know, that they can survive in the city, in the urban scape, eating crumbs, looking for any eat anything. Yeah. And that's why they are so that the land surviving so well. **Myna 2** I just follow smell. Curry puff. Waste. Bus fumes. **Myna 1** Then heat. Panas. Panas. **Myna 2** Then noise.	
4 Blk 209 v8 04 Blk 209.mp3 **Duration 04:04**	**Myna 1** Old names always have a "vibe," don't you think? Like Ang Mo Kio. **Myna 2** Ya lor. Red Hair Man Bridge. Ang Mo means "Red Hair" in Hokkien—how people used to describe the Caucasians. **Myna 1** You think it refers to Sir Thompson’s hair? He was quite the Ang Mo (Westerner).	**Some discrepancy** **00:41-00:54** Andrew's tomato explanation is shorter. The repeated Thompson / tomatoes exchange is not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	Myna 2 I still think it refers to tomatoes. Red and round! Much better than a bridge. **Reclaimed Archive** Spelling is fixed. Meaning is still in motion. **Andrew Tay** No, it means tomato. Oh, no. It's not true. Yes. Tomato in the in the the Hokkien dialect. So it means tomato. It's referring to the fruit tomato. in fact, in the Ang Mokio estate, just somewhere down the road here, there's the sculpture of two tomatoes by the roadside. Yeah. I think just outside the end, you see the some people say it's refers to the white hair. To that, to the colonial white hair. Yes, yes. If you want to, if you want to literally translate these three words and means rate in Hokkien, the food chain dialect and then more means hair because all the Westerners all have that blond or red hair. **Myna 1** Does it not remind us to the red hair of Sir Thumbel Thompson? **Myna 2** I like to refer it to tomatoes. **Bus 166** Approaching Kebun Baru. A unique place where birds gather to sing. Every Sunday, bird singing competitions take place here. You may step off Ang Mo Kio Pri Sch. Or stay with me. Please note that birds are not allowed on the bus! **Myna 1** You hear that? The bus says birds not allowed! Discrimination leh! **Myna 2** Don't care lah. Stop and audio	Script dialogue	Discrepancy comparison
	some birdsong for the people. **Andrew Tay** Ya there are still a lot of birds that are captured from the wild to be sold as patterns. So this is something that you have to consider. You have to… Is it sustainable to be constantly harvesting a resource from the from the wild? Where where you know, it's not an infinite source. And with habitat degradation, all these wildlife are finding even more difficult to. This is a challenge for them to already survive in a shrinking habitat, much less to be still, to be captured and utilize that every. It is quite a destructive industry actually. If. Yeah, if the songbirds are not farmed for the hearty. **Myna 2** Listen! My friends are there! The Mata Puteh— the Oriental White-eye—and the Zebra Doves. **Myna 1** The names might stay on the signs, but the sounds... the sounds linger in the air long after we fly away.	
5 Ang Mo Kio Pr Sch v8 05 Ang Mo Kio Pr Sch.mp3 **Duration 04:32**	**Bus 166** Alright—we are rolling! Mayflower Stop Ahead A good name, if you like trees. Fewer flowers than promised, though. **Reclaimed Archive** Mayflower, the name of a ship that crossed the ocean. People, beliefs, fears, ambitions— a floating beginning. History remembers the landing, not the uncertainty of the voyage. **Andrew Tay** They have planted a lot of lipstick. Palm. You see the lipstick palm at the foot of the blocks. The red, the palm with the red, red trunks. It's actually a native species of palm. And it's totally extinct in the while here. Extinct in the wild. They are all only found in gardens. The is the iconic logo of the Singapore Botanic Gardens.	**Some discrepancy** **01:35-01:52** Fig Child: "Say ulu kalang ... So do I" not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	Fig Child Leaves brushing concrete. Roots pressing into forgotten soil. Where paths end, the fig begins. **Myna 1** Eh! Kallang River coming up. You feel that or not? Something macam—like—creeping in. Bit eerie leh. **Myna 2** Ulu vibes, man. My grandfather say we must say Ulu Kalang the old way. If the humans only look at their digital charts, the forest goes quiet... and so do we. **Fig Child** Say ulu kalang the old way too. If only the chart survives, the forest goes quiet. So do I. **Reclaimed Archive** Kallang carries the name of the Orang Kallang, people of the river, present before the city and absent from its records now. Before plantations and zoning maps, this area belonged to the indigenous inhabitants of Singapore — communities who lived not only on land but also on boats, moving between sea, river, and shore as part of a single environment. **Andrew Tay** The higher reaches, the deeper reaches. So if you look along, that means Ulu Kallang headwaters of the the Kallang River, because after all, the river will flow up to the sea. Singapore was almost totally covered by primary rainforest. And this would include freshwater swamp forests like in the Jurong area. Apparently there was like huge tracks of freshwater swamp forests. And now this this right now, currently this this ecosystem is so highly endangered in Singapore. Ya only found in the few places in our central catchment. **Myna 1 and Myna 2** Kallang, Kallang Kallang, Kallang	

Stop and audio	Script dialogue	Discrepancy comparison
	Andrew Tay Which is a nice linear park. But the interesting thing about this part is that the river runs through it, and from here you can even walk to the headwaters of the current river, which is in the lower and upper Peirce Reservoir Park. So this river ends at Kallang MRT station. So you can see the. Our roadsides here are very large, with lots of big green trees flanking the road, with lots of epiphytic ferns and other plants growing on them, creating a very cool canopy over the the roads. We are going to be bypassing the Lower Pierce reservoir and it's quite an old path, but we in Singapore we do not have a natural links or big bodies of fresh water like that. So the reservoir was created in the olden days to ensure a supply of fresh water for the growing population.	
6 Opp Blk 244 v8 06 Opp Blk 244.mp3 **Duration 04:04**	**Myna 1** See forest now. But underneath— ground not quiet. **Myna 2** Soil got memory, leh. Smell not the same anymore. Tembusu wood. Pepper vines. Gambier sap. Now— quiet. **Myna 1** Then suddenly... bam! Everything became the same. Rubber. Rubber. Rubber. Rows and rows of trees that didn't even belong here. What was that bam!? **Andrew Tay** Botanists. So rubber was brought in by the British to test their viability as an economic plant. Right. Yeah. And it did very well here. Yeah. So the descendants of all those rubber trees that were planted here in the 200, 200 years ago, they are still around and see them. They are very common just by the roadside. **Myna 2** Trees planted to bleed them. Latex in the trunks, latex in the buckets, then latex in the tires. That’s how the city started	**Minor discrepancy** **00:12-00:24** Opening rephrased. "Soil got memory, leh" not detected. Check audio. **02:05-02:21** Latin species name not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	rolling. **Andrew Tay** So it's not a native plant, rubber. It's originally from Brazil, the Americas, but sort of taken out of that and taken out of the Americas by the British colonists and tested in the rest of the Asian colonies. So it's not a native plant, but a local. A locally danger climate is able to eat it. So the Raffles banded leaf monkey or the Raffles banded langur, we do have a very small colony of them on the island, highly endangered. And they they do in rubber, the green rubber, fruits and the leaves. So they manage to eat a non-native plant. The monkeys that we see here, you can see them just by the roadside. Sometimes they do here. Yeah. This is part of the Central Catchment Nature Reserve where they are found in. **Reclaimed Archive** Raffles' banded langur. Also known as the Raffles' banded leaf monkey. Presbytis femoralis. Native to Singapore and southern Peninsular Malaysia. Once found across Singapore, it is now restricted mainly to the Central Catchment Nature Reserve. It feeds primarily on leaves and fruit and spends most of its time in the forest canopy. One of Singapore's rarest native primates.	
7 Aft Ang Mo Kio Ave 1 v8 07 Aft Ang Mo Kio Ave 1.mp3 **Duration 05:20**	**Bus 166** Maybe that was me. My wheels. I used to run on solid rubber rims— hard. Loud. Every bump passed straight into the body. The rubber came from trees. Planted in rows. **Myna 1** Tapped, collected, carried. Then there were more cars. **Myna 2** More roads. More wheels than before. **Bus 166** I kept rolling. Latex turned. The city moved. Once, buses like me were called mosquito buses— converted from old Ford cars, with the back removed and three seats installed. They had no	**Some discrepancy** **00:00-00:15** "Maybe that was me. My wheels" not detected. Transcript starts with "I used to run on solid rubber rims." Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	fixed stops; passengers could board or alight wherever they wished. Commuters favoured them for their convenience and their frequent appearance. **Reclaimed Archive** I was only a small boy carrying a chicken pressed tightly against my chest as I changed from one bus to the next. My father had sent me to deliver it to my aunt on Orchard Road. I was so shy, too paiseh even to reach up for the bell, shrinking a little each time the chicken let out a startled squawk and other passengers turned to stare. I tried to calm it, holding it closer, tighter. Somewhere along the way, the bird went quiet. By the time I reached my stop, it had died in my arms. **Archive voice** Last time the buses used to be more laoya. They used to stink. And some of the conductors were cheeky, purposely pushing young women around just so they could touch them. My friend used to carry a needle to poke them if they got too fresh! The buses were very slow, no air conditioning, and the doors never closed **Myna 1** You hear that? A boy with a chicken on the bus! Alamak, so paiseh—so shy—he didn't even dare to press the bell. **Myna 2** Last time buses were very laoya one— **Myna 1** broken and smelly. **Myna 2** Stank of sweat and livestock. And the conductors were so cheekopek (pervert), always trying to touch the young ladies. **Myna 1** Windows all open, rattling through the heat. People carrying ducks and pigs like it's a moving wet market.	

Stop and audio	Script dialogue	Discrepancy comparison
	Myna 2 Buses getting robbed, mosquitoes biting everyone... movement was slow, but life was loud! Glad we fly outside leh.	
8 Aft Windsor Pk Rd v8 08 Aft Windsor Pk Rd.mp3 **Duration 06:24**	**Bus 166** We’re moving through Thomson now. A name people say quickly. It belonged to a colonial surveyor who mapped this island before it was rearranged. The road feels older than the name. Quiet houses. Flame trees. Gardens behind low fences. Bukit Kalang to Bukit Peirce— the TreeTop Walk rises about seven storeys high. The ground keeps its own routes— paths that never became roads. Every few stops, another name. Faber – Windsor - Shunfu They don’t match each other. They sit side by side on the same slope. **Andrew Tay** I'm most familiar with the name Flame Tree. Yeah, because the flame tree is the flame of the forest. A tree that is endemic and only found in the on the island of Madagascar. But it's highly on the mental. Yeah. So, as you can tell by its name, flame free when it when it's in full bloom. Ya the whole tree is covered with red flowers. So I guess the estate estate was named after that particular tree, the flame tree or flame of the forest. **Reclaimed Archive** The Flame of the Forest. Delonix regia. Recognisable by its spreading canopy and bright red-orange flowers. Introduced to Singapore as an ornamental tree, planted along roads and in parks. Thomson Road. Once a supply route. Later, a residential spine. Now a transit corridor, re-dug by the Cross-Island Line.	**Minor discrepancy** **01:32-01:49** "Delonix regia" not detected. Check audio.

9 Shunfu Est v8 09 Shunfu Est.mp3 **Duration 04:16**	**Bus 166** Prepare to get off at Opp St. Theresa’s Home to wander a short trail to MacRitchie Reservoir, take in the view and come back or stay with me. **Myna 1** Eh, the metal monster is slowing down. **Myna 2** The forest is right there, sia. So close to the road, can almost touch the leaves. **Andrew Tay** So sometimes you get the wildlife conflict happening, right? Because the houses are just exactly at the forest. And then of course, you get the monkeys, you get snakes coming in. You get insects. Yeah. So there is the the unfortunate thing is that there is no buffer area between the estate and the forest. And then problems like that happen. **Fig Child** The Fig Child does not move. It grows around what was built, and what was abandoned. Steel rusts. Concrete cracks. The fig stays. **Myna 1** Quiet, quiet! Someone else is coming. Someone speaks for the trees. **Myna 2** Let’s eavesdrop. I’ll stay nearby. The Archive is listening, and we can catch the gossip while he leads the way. **Reclaimed Archive** Listen to a living archive of the land. **Bus 166** We are approaching Opp St. Theresa’s Home. You have a choice. Get off at the next stop and take a short walk to MacRitchie, or stay with me and continue the journey. If you get off, take the underpass to reach MacRitchie. I’ll meet you again	**Minor discrepancy** **00:22-00:29** "Eh, the metal monster is slowing down" not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	along the way. **Andrew Tay** Finally entering the forest. **Bus 166** Next Station Opp St Theresa’s Home MacRitchie on the right. Folks used to call this ulu—upstream, a bit out of the way. What does it mean to belong in a place that won’t stop changing? Get off this station or stay with me and let’s listen to the silence between sounds.	
10 Opp St. Theresa's Hme v8 10 Opp St. Theresa's Hme.mp3 **Duration 03:52**	**Bus 166** We are arriving at Opp St Theresa’s Home.	**Minor discrepancy** **00:12-00:15** Script: "arriving." Audio transcript: "approaching." Check audio.
10b Opp St. Theresa's Hme (Get off) v8 10b Opp St. Theresa's Hme (Get Off).mp3 **Duration 03:12**	**Andrew Tay** Hi, I'm Andrew Tay, a nature educator of the past 30 years until now. It's my pleasure to show you MacRitchie. I'm not an expert, but I have been out in the field in the wild for many years. So I'm familiar in a way. I will share with you what I know about, from my years of going out there, walking about, looking at things. MacRitchie is beautiful. It's part of the Central Catchment Nature Reserve. If you look at the map of Singapore, the patch of green right in the centre of the island, that is the crown on Singapore Island. Beautiful, still existing, still surviving, but under threat of course, especially by the forthcoming cross-island line. **Myna 1** "Still surviving," he says. **Myna 2** Wah, those words... they don't fly away so fast. They stay in the air like heavy rain.	**No discrepancy identified**

Stop and audio	Script dialogue	Discrepancy comparison
	Andrew Tay So we are still actively raising awareness about this cross-island line and how we can try to mitigate the bad effects that may come after, the possible bad impacts that may arise from that. But it's going to happen from east to west. I think Singapore is going to break up like a jigsaw puzzle. Happened to be in my pocket. Rubber seed. I didn't know that. Ya, I didn't know it's there. It's like wondering. What's that in my pocket?	
11 Walk to Macritchie 1 v8 11 Walk to Macritchie 1.mp3 **Duration 04:31**	**Fig Child** Go and find me in there. Search for me. Please. I am here! **Myna 1** Eh, look at this human. Going into the underpass ah? Must be following that Andrew guy to the big Fig tree. **Myna 2** Jom (Let's go), follow them lah. Maybe they carry some bread crumbs in their pockets. **Andrew Tay** We have many different kinds of figs or species. And yeah, it's a strangler. If it's like, you know, growing beside a house on your roof, you know, over a statue or beside another tree, it could eventually use that as a support and strangle it to death. If you have it on your roof, you don't remove it, one day you see one of the roots coming out of your toilet bowl. so they are very, the roots are very extensive. You see, they are running all over the place, everywhere. **Myna 2** You hear that? Roots coming out of the toilet bowl! Scary sial (Really scary). **Myna 1** Aiya, don't listen to him. The humans are just scared because the Fig Child is looking for sunlight. We birds love it—rarely erased, always returning	**Some discrepancy** **00:08-00:18** Two Myna underpass / bread-crumb turns not detected before Andrew starts. Check audio. **02:50-02:54** Script: "Which friends?" Transcript: "Which kaki?" Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	Andrew Tay It is. It's it's it's a couple of different things. So the. So the tree will be aerial roots produced from the main branches and coming down to the ground to form like lakes or stilts or the tree that is the incredible strangling fig tree, a kind of fig. The fig produced are not not poisonous, but not really palatable to humans. But the fruit eating animals love it. So the monkeys, the squirrels on bills, fruit eating birds. Yeah. And whatever drops to the ground, you get like mouse deer, wild pigs feeding on them. Yeah. So, yeah, this is the strangling fig. And why is strangling fig? Because like, as you can see, it's growing beside a loud tree. And eventually the roots, some of the roots already have gone onto this tree growing next to it. And soon it may strangle this other tree growing beside it. And not because it's evil, because it's. They are both fighting for survival, right? And if the strangler fig can sort of use the neighboring tree as a support for it to grow bigger and taller and higher, yeah, it will survive better. So yeah, the roots are very, very extensive and very versatile. **Fig Child** They fear my roots because we search for what was lost. We climb walls, statues, rooftops— anything that remembers sunlight. I am a child of these trees. Rare, almost erased. When one of us returns, the forest breathes a little deeper. Psst. I am up here! Helloo. **Myna 2** Do you remember our kaki (friends)? **Myna 1** Which friends? **Myna 2** Our friends who lived in the old trees. Now, when a tree falls, it’s just... silence. **Myna 1** Ya lor. No voices, no nests. The home breaks, and the birds don't come back. I keep listening for the sounds that are	

Stop and audio	Script dialogue	Discrepancy comparison
	missing. **Fig Child** This is my story. Yes. I am a strangler. I do not begin on the ground. I begin in the air— on a roof, a wall, a statue, the shoulder of another tree. I borrow what is already standing. I hold on. I wait. My roots grow downward, slowly, patiently, finding cracks, pipes, drains, soil. They spread everywhere— under tiles, through walls, sometimes even into your bathroom. People say I kill. But that is not how I understand it. I surround. I outlast. I take the shape of what was there until it cannot breathe anymore. This is not anger. It is persistence. I am what happens when something small refuses to disappear. **Myna 1 and Myna 2** Poke you at the reservoir!	
11b New Pavillion v8 11 b New Pavillion.mp3 **Duration 01:36**	**Andrew Tay** Can I spray some repellent? I can pull it down. Pull it down. I also have patches. Patches not so good because when it gets sweaty, it drops. No, I put it in here. Yeah, it'll drop. Okay. Yeah, just spray a bit before you go. There's no cure for dengue fever. Dengue is in Singapore. Malaria, no, but dengue, yes. Just put a bit, yeah. **Myna 1** Wah, that smell! Phew! So sharp, make my beak itchy. **Myna 2** That's Tiger Balm lah, bodoh (stupid). **Myna 1** You call me bodoh? **Myna 2** Ya, stupid. My grandmother says it's "biochemical engineering"—a mix of old forest knowledge and city science. **Myna 1** Biochemical what? Too chim (profound) for me. I just know it's	**Minor discrepancy** **00:12-00:18** Audio adds "Does anyone need repellent? Maybe you" before the scripted opening.

Stop and audio	Script dialogue	Discrepancy comparison
	in everyone’s bag, like a personal air-con for their skin. **Reclaimed Archive** Item: Tiger Balm Category: Patent Medicine / Transcultural Ointment Origin: Developed in Yangon 1870s; commercialised in Singapore by the Aw brothers, 1920s. Cultural note: Marketed for pain relief, headaches, insect bites, congestion. Used widely across Southeast Asia; migrated globally through diasporic trade routes.	
12 Walk to Macritchie 2 v8 12 Walk to Macritchie 2.mp3 **Duration 07:04**	**Andrew Tay** We’ve got about 17 to 20 reservoirs. This is the oldest one. MacRitchie’s the oldest. all to create a store of fresh water for the growing population, right? So, yeah, they will dam it up, but this place, I’m sure it’s low It’s a bit lower than the surrounding area, so which is why I think they selected this location also to create that depression to store water. Yeah, so this was built in 1860-something by the British when they came here because they knew that the population is growing and they needed fresh water for the people and for the industries that are happening, for the plantations and whatnot, yeah. So this is the oldest reservoir in Singapore. And we buy water, we buy water from Malaysia, yeah, some of it will be stored here. So this is actually named after a British municipal engineer, James McRitchie. The locals still didn't say, no, we want a local name. There are many places like Australia, they're all asking for their local aboriginal names. Take away all the colonial names. But Singapore, no. We don't have too bad a relationship with our colonists. What could be the name for the forest? I suppose Malay. Because all these places, Malay names, like Kallang, like Gelam, all these are Malay place names. But McRitchie, yeah. No, I don't know. I don't think there was any Malay village, kampung live in here. Until later, later on. But you're talking about 200 years ago, most of these communities were coastal. Not inland. And also here, there weren't any, there wasn't a big reservoir like this. Maybe there's a name on an old map. There would be. Not McRitchie, but something else. Here mostly introduced species like tilapia	**Minor discrepancy** **00:11-00:55** "Oldest reservoir" statement occurs later in the audio. **03:04; 04:28** Latin species names not detected. Check audio.

Stop and audio	Script dialogue	Discrepancy comparison
	from Africa, this sea slit fish from South America got lots. Even the turtles that you see swimming about, the freshwater turtles, from America, not local. All introduced and those are the ones that are like the foreign talent. They thrive very well here. They do better than the locals. **Myna 2** MacRitchie... James McRitchie. Why all the names must be Ang Mo (Westerner) names? **Myna 1** Andrew says Singaporeans "don't have a bad relationship" with the colonists. But last time this place was Bukit Kalang. Now it’s just a "depression to store water. **Myna 2** And look at the pond! Got Tilapia from Africa and turtles from America. All "Foreign Talent" leh **Myna 1** Even the turtles join the "Foreign Talent" debate. They thrive better than the locals! **Reclaimed Archive** Long-tailed macaque. Macaca fascicularis. Native to Singapore and widely distributed across Southeast Asia. They live in social groups, mainly along forest edges and near water. At MacRitchie Reservoir, they move between the forest, trails, roads, and visitor areas. They are omnivores, feeding on fruits, leaves, insects, and other available food. Highly adaptable to human environments. Do not feed them. Do not carry food visibly. Maintain a distance. **Andrew Tay** Watch out your bag! It's so good at opening stuff. I don't think they know how to open a zipper and open a button. They may accidentally pull it. You saw it? Like using the hand to manipulate opening a zipper monkey. Because, yeah, they they need to have. What do you call that? There's a monitor water monitor lizard over there. Then water monitor lizard. The buyout

	working there like a like a model. It's harmless. Just don't. Don't touch it. Don't go yet. So prowling and looking for food. You see, it's like all the animals are coexisting quite nicely in that sense. **Reclaimed Archive** Malayan water monitor. Varanus salvator. One of the largest lizards in Singapore. Commonly found near reservoirs, rivers, mangroves, and canals. A strong swimmer and opportunistic feeder, consuming fish, crabs, insects, carrion, and other small animals. Frequently observed along the edges of MacRitchie Reservoir. Usually avoids humans. **Andrew Tay** Well, you're looking at three main animals, like coexisting, but in a forest they are like millions, thousands and millions of living things. Coexisting. Yeah. Living things. We are talking about living things, right? Yeah. Big animals and small microbes, fungi, they're all coexisting. And benefiting each other and sustainably. Utilizing resources, nutrients. Okay, so we are at the edge, the eastern edge of the Ritchie Reservoir. And along the banks you get the elevated boardwalk as well as the dirt trail that goes into the forest. Here you get lots of rubber trees. Which one? The light, the ones with the light green leaves, droopy light green leaves. It's three leaflets to one. One stalk. Ya ya. Not not not the one on the right, but the one on the left. So all those against the sky? Yeah, those are also rubber. So if you come here at the right season during a very hot day, you, you'll hear a lot of loud pops coming from the tree tops. And then you get the shells and the seeds of the rubber raining down on you. Sounds like gunfire. Yes, yes, quite a sharp crack, a pop. And then that's how they disperse their seats by explosive action. **Unidentified voice** That's rubber. No, no, it's fine with the three leaflets. You can hear the call of the greater racket Bronco with a very metallic call. Here you also get the long term mechanics going on to the door. The dodo is a native wildflower, a shrub with beautiful pink flowers, and there you can see them plucking the blackberries of

	the. These blackberries of the sun are edible, but we leave them for the wildlife.	
13 Walk to Macritchie 3 v8 13 Walk to Macritchie 3.mp3 **Duration 05:20**	**Andrew Tay** this is a very old gazebo. I'm sure it was like done in the late 1800s and it's still around. It's so lasting, the materials that they've used. And you get a good view of the reservoir. Romantic. Victorian. You can come here with your lace umbrella This was built by the British in the late 1800s. Or maybe early 1900s. Yeah, original. And I think there's a colony of bats up there. Some evenings I come here to listen to the bats emerging from that hole. They're like hiding in there, roosting in there. **Myna 1** Look at that Gazebo. Someone said it's "Victorian." Sounds like a very fancy birdcage. **Myna 2** Victorian or not, the bats love it. They roost in there while the humans take romantic photos with their lace umbrellas. **Andrew Tay** By the side of the path. Here you get two very tall and upright tembusu trees. This is the native species of tree with very hard wood. So the wood in the past or in in parts of Malaysia. tembusu, another native tree found on the rainforest edge. And in the olden days people won't say that you've got a heart of stone, they'll say you've got a heart of tembusu because the wood in there is very hard. If you go to Malaysia, sometimes on the roadside stalls, they will sell chopping boards made of the middle wood of the tembusu trunk. Beautiful, they make it. Heart of tembusu, meaning it's very hard-hearted. One of our native trees, you can see it on our $5 note. Do I have a $5 note? **Myna 1** Wah, check your feathers. You got a $5 note or not? The tree is right there on the money.	**Minor discrepancy** **03:53-04:06** "Passenger of Time, this is the end of your walk" not detected. The next bus sentence is present. Check audio.

	Myna 2 Siao ah (You're crazy)? I only see trees on paper or in the water. The real forest is being pushed away by all these new MRT lines. **Myna 1** Ya lor. The real forest is being pushed back, man. The ground is so pressed, everything is just piling up. One block on top of another, one road on top of another. **Myna 2** Soon the only trees left will be the ones they print on the $5 note. If we want to see a real Tembusu, we better look fast before it becomes another "jigsaw puzzle." **Andrew Tay** This is a native plant called the Simpo Ayay and the name is onomatopoeic, meaning that it’s the sound, it’s the sound that it makes. So apparently when you cut it, it’s got hollow stems that are packed with gas, you know, and then when you cut it, sometimes it gives you a ssss. When the gas escapes, it’s got that ssss sound. But no, we call it, the more polite name is Rojak Leaf. Rojak meaning the local salad, and you use it to wrap a lot of food items, including tempeh, which is that fermented soybean cake. Every time you buy a piece of tempeh, it’s mostly in this leaf, Simpo Ayay Leaf. **Myna 2** Wah, Rojak! Now I’m hungry. Cucumber, youtiao (dough fritters), and that thick dark sauce... **Myna 1** Shiok (Delicious)! When the crumbs fall, I’m moving in. Stay close, don't let the sparrows take it! **Reclaimed Archive** The pavilion at MacRitchie Reservoir Park. A rest point overlooking the reservoir. The reservoir was completed in 1868 and was Singapore’s first impounding reservoir. Originally known as the Impounding Reservoir, it was renamed

	MacRitchie Reservoir in 1922. **Andrew Tay** Thank you. Thank you for having me on this walk. **Bus 166** Passenger of Time, this is the end of your walk. If you want to continue the journey with me, follow the map to Mt Alvernia Hospital bus stop. I'll meet you there. See you soon.	
14 Mt Alvernia Hosp v8 14 Mt Alvernia Hosp.mp3 **Duration 04:16**	**Bus 166** Welcome back, Passenger of Time. Doors close. The air shifts. Cooler. Even. Contained. **Reclaimed Archive** Temperature check. Internal environment: 27°C. External estimate: 31°C. Historical reference (19th century): Mean recorded temperature: ~26°C. Data appended. **Fig Child** A tiny little bit of forest, it does make a big difference. It may be humid, but when you measure the temperature, it's cool. **Myna 1** Ahhh... so shiok (fantastic). The air-con in here is much better than the panas (heat) outside. **Myna 2** Ya lah, 27 degrees. I can finally close my beak and relax my feathers. **Myna 1** I'm not even from here, you know. My ancestors came from the South, across the water. But now I stay because the air is "contained."	**Minor discrepancy** **01:33-01:37** Script: "panas." Audio transcript: "heat." Check audio.

15 Opp S'pore Polo Club v8 15 Opp S'pore Polo Club.mp3 **Duration 05:20**	**Bus 166** Good to have you on board—Bus 166 here. Stay on board. We're moving. Passengers of Time, We're passing through a work zone. Below us, the ground is being opened. An underpass taking shape. I roll on. Outside— machines, lanes, lights. Traffic tightening, loosening. I don't slow for long. Look if you want. Or don't. The sound carries us through. **Reclaimed Archive** You are now listening to a voice on the bus **Phone caller** Hello? Can you hear me? Yeah, I'm on the bus. No, no. I've got time. Yeah… I did all those things. But you can't really go there anymore. I don't know. Chance, I guess. It's strange here sometimes. Everything works. You know what I mean? It works. No, I'm still here. I think I'm just looking for something. I don't know what exactly. Some distance, maybe. A way to see it from outside. Sorry, what? No. I'm listening. I think I'm just a bit… discontent. Maybe with how things are. Or how I am inside them. I don't know. **Archive voice** Everything costs a lot in Singapore. I can never save much. I send what I can. **Phone caller** Yeah. Rent mostly. Food. Everything. I'm living alone here. It's okay. Just quiet. Sometimes too quiet. London was different. I don't mean better. Just— I didn't think so much before doing something. I'd go somewhere. Spend money. See what happened. Here I calculate everything. Maybe I've just changed. **Distant archive voice** Let's talk about the rest later. **Phone caller** Yeah. We can talk later. Actually— stay on for a bit. I don't have	**Major discrepancy** **00:00-01:53** Script welcome not detected; first recovered bus speech is the work-zone passage. Check audio. **04:00-05:20** "Let's talk ... later" and "stay on for a bit" ending not detected. Check audio.

16 Opp Novena Lodge v8 16 Opp Novena Lodge.mp3 **Duration 04:08**	**Bus 166** BUS 166 here. On your left— the church that named a district. Novena: once a weekly devotion from 1949, before that, simply the ninth milestone, and before that, a cemetery. Names shift; the ground endures. What does it mean to belong? You're part of this moving story too. Let's listen for the quiet between the noises, and see what rises to meet us. **Myna 1** Eh, we are in Novena already. You know why they call it that? Because of the weekly devotion from 1949. **Myna 2** Devotion ah? My grandmother say last time people just called this the "Ninth Milestone." Very ulu (remote) then. **Myna 1** Ulu only? Even earlier, it was a cemetery. First the dead, then the church, then the mall. The ground stays, but the humans just keep changing the name labels.	**Major discrepancy** **01:07-02:02** Audio adds the closing "Here ends our journey - for now." This PDF places it at stop 17.

	than 39,000 births, the highest in the world. A baby factory? For many, this is a place of hope, fear, and new beginnings. **Andrew Tay** We were sixteen in a two-room flat. You know… life was very different then. My mother carried everything. “I’m sixty-one this January,” he said, “and I grew up surrounded by women, all my sisters.” **Reclaimed Archive** A memory of resilience woven into the ground beneath our feet. December 2013. Sakthivel Kumarvelu, A migrant worker struck and killed by a bus on Racecourse Road. Grief turned to fury, and Singapore saw its first riot in decades. Beneath that night lay deeper questions: How do migrant workers live? How are they seen? How do their rights matter? About 400 people took to the streets of the commercial district known as Little India, after Sakthivel Kumarvelu, an Indian construction worker was hit and killed by a bus. **Bus 166** It wasn’t my line. But buses are siblings— all cut from rubber, steel, and routes someone else designs. That night, they flipped one of us over. Set it on fire. Not out of hatred for a vehicle— but because pain needs a surface to strike against. I remember the heat even if I wasn’t there. Every bus does. We carry people. We witness lives. Sometimes we carry the weight of what the city refuses to speak. **Myna 1** Eh, metal monster is moving! **Myna 2** Little India coming up! Get your beak ready—the spices there are going to make us sneeze! **Bus 166** Passenger of Time. Here ends our journey—for now. We have crossed the island together, through places that have changed, places that are changing, and places that may soon exist only in	**See stop 16, 01:07-02:02** Closing speech is recorded in stop 16, not here.
